

Question 1. Circle the correct answer.

1. In simplex method, we add \_\_\_\_\_ variables in the case of '='

- |                   |                     |   |                      |
|-------------------|---------------------|---|----------------------|
| A. Slack Variable | B. Surplus Variable | <input checked="" type="radio"/> C. Artificial Variable | D. None of the above |
|-------------------|---------------------|---|----------------------|

2. If the feasible region of a LPP is empty, the solution is \_\_\_\_\_ *no solution*

- |  |   |                |                      |
|--|---|----------------|----------------------|
| <input checked="" type="radio"/> A. Infeasible | <input checked="" type="radio"/> B. Unbounded | C. Alternative | D. None of the above |
|--|---|----------------|----------------------|

3. A minimization problem can be converted into a maximization problem by changing the sign of coefficients in the \_\_\_\_\_

- |                |   |                 |                      |
|----------------|---|-----------------|----------------------|
| A. Constraints | <input checked="" type="radio"/> B. Objective Functions | C. Both A and B | D. None of the above |
|----------------|---|-----------------|----------------------|

4. If in a LPP, the solution of a variable can be made infinity large without violating the constraints, solution is \_\_\_\_\_

- |               |   |                |                      |
|---------------|---|----------------|----------------------|
| A. Infeasible | <input checked="" type="radio"/> B. Unbounded | C. Alternative | D. None of the above |
|---------------|---|----------------|----------------------|

5. In maximization cases, \_\_\_\_\_ are assigned to the artificial variables as their coefficients in the objective function

- |       |  |      |                      |
|-------|--|------|----------------------|
| A. +M | <input checked="" type="radio"/> B. -M | C. 0 | D. None of the above |
|-------|--|------|----------------------|

6. Alternative solution exist in a linear programming problem when

- |                                       |  |                                 |                     |
|---------------------------------------|--|---------------------------------|---------------------|
| A. one of the constraint is redundant | <input checked="" type="radio"/> B. objective function is parallel to one of the constraints | C. two constraints are parallel | D. all of the above |
|---------------------------------------|--|---------------------------------|---------------------|

7. Constraints in an LP model represents

- |                |                 |   |  |
|----------------|-----------------|---|--|
| A. Limitations | B. Requirements | C. balancing limitations and requirements | <input checked="" type="radio"/> D. all of above |
|----------------|-----------------|---|--|

8. To convert  $\geq$  inequality constraints into equality constraints, we must

- |                           |                                    |  |   |
|---------------------------|------------------------------------|--|---|
| A. add a surplus variable | B. subtract an artificial variable | <input checked="" type="radio"/> C. subtract a surplus variable and an add artificial variable | D. add a surplus variable and subtract an artificial variable |
|---------------------------|------------------------------------|--|---|

9. If for a given solution, a slack variable is equal to zero, then

- |   |                               |                            |   |
|---|-------------------------------|----------------------------|---|
| <input checked="" type="radio"/> A. the solution is optimal | B. the solution is infeasible | C. there exist no solution | <input checked="" type="radio"/> D. None of the above |
|---|-------------------------------|----------------------------|---|

10. In the optimal simplex table  $z_j - c_j = 0$  value indicates

- |                       |               |  |                  |
|-----------------------|---------------|--|------------------|
| A. unbounded solution | B. degenerate | <input checked="" type="radio"/> C. alternative solution | D. None of these |
|-----------------------|---------------|--|------------------|

S

Question 2. Consider the following problem.  
 Maximize  $Z = 4x_1 + 2x_2 + 3x_3 + 5x_4$   
 subject to

$$2x_1 + 3x_2 + 4x_3 + 2x_4 = 300$$

$$8x_1 + x_2 + x_3 + 5x_4 = 300$$

And  $x_j \geq 0$ , for  $j = 1, 2, 3, 4$ .

$$\max Z = 4x_1 + 2x_2 + 3x_3 + 5x_4 + M\bar{x}_5 + M\bar{x}_6 = 0$$

$$-M(2x_1 + 3x_2 + 4x_3 + 2x_4 + \bar{x}_5 = 300)$$

$$-M(8x_1 + x_2 + x_3 + 5x_4 + \bar{x}_6 = 300)$$

- (a) Using the Big M method, construct the complete first simplex tableau for the simplex method and identify the corresponding initial (artificial) BF solution.
- (b) Identify the initial entering basic variable and the leaving basic variable.

Z	$x_1$	$x_2$	$x_3$	$x_4$	$\bar{x}_5$	$\bar{x}_6$	RHS	Ratio
Z	1	$(-4-10M)$	$(-2-4M)$	$(-3-5M)$	$(-5-M)$	0	-600M	
$\bar{x}_5$	0	2	3	4	2	1	300	$300/2$
$\bar{x}_6$	0	8	1	1	5	0	300	$300/8$

$\max Z + (-4 - 10M)x_1 + (-2 - 4M)x_2 + (-3 - 5M)x_3 + (-5 - M)x_4 = -600M$

artificial  $\Rightarrow \bar{x}_5, \bar{x}_6$

first leaving variable =  $x_1$

first entering variable =  $\bar{x}_6$

Z	$x_1$	$x_2$	$x_3$	$x_4$	$\bar{x}_5$	$\bar{x}_6$	RHS
Z	1	0	0	0	0	0	$-225M + \frac{300}{2}$
$\bar{x}_6$	0	0	$1/8$	$3/4$	1	0	$225$
$x_1$	0	$1/8$	$1/8$	$5/8$	0	0	$300/8$

Question 3. A company produces precision medical diagnostic equipment at two factories. Three medical centers have placed orders for this month's production output. The table below shows what the cost would be for shipping each unit from each factory to each of these customers. Also shown are the number of units that will be produced at each factory and the number of units ordered by each customer.

From	Unit Shipping Cost			Output
	Customer 1	Customer 2	Customer 3	
Factory 1	\$600	\$800	\$700	400 units
Factory 2	\$400	\$900	\$600	500 units
Order size	300 units	200 units	400 units	

A decision now needs to be made about the shipping plan for how many units to ship from each factory to each customer.

Formulate a linear programming model for this problem. DO NOT SOLVE

~~$x_1$  - units of 1,  $x_2$  - units of 2, units of 3 =  $x_3$~~   
 ~~$x_1, x_2, x_3$~~

~~$x_1$  → units from fact 1  
 $x_2$  → units from fact 2~~

~~$400x_1 + 500x_2 \leq 300$~~

~~$400x_1 + 500x_2 \leq 200$~~

~~$400x_1 + 500x_2 \leq 400$~~

$x_1, x_2 \geq 0$

max  
 $Z = (600 + 800 + 700)x_1 + (400 + 900 + 600)x_2$

↳ maximize  
 Profit of shipping  
 for factories

1.25 0 -5  $\frac{3}{4}$  (3/4) 2 8/3

18

Question 4. Max  $Z = 2x_1 + 3x_2 + 4x_3$   $max Z = (2+d_1)x_1 + (3+d_2)x_2 + (4+d_3)x_3$

s.t.  
 $1x_1 + 2x_2 + 3x_3 \leq 11$   
 $2x_1 + 3x_2 + 2x_3 \leq 10$   
 $x_1, x_2, x_3 \geq 0$

(4)  $min W = 11y_1 + 10y_2$   
 $2y_1 + y_2 \geq 2$   
 $3y_1 + 2y_2 \geq 3$   
 $2y_1 + 3y_2 \geq 4$   
 $y_1, y_2 \geq 0$

Consider the FINAL tableau and answer the following questions

		Coefficient of					RHS		
		$d_1$	$d_2$	$d_3$	0	0			
	Z	$x_1$	$x_2$	$x_3$	$x_4$	$x_5$			
$d_1$	Z	0	1	0	0.5	0	1	0.5	16
$d_3$	$x_3$	1	0	0	0.25	1	0.5	-0.25	3
$d_1$	$x_1$	2	0	1	1.25	0	-0.5	0.75	2

- 2.5 Calculate the allowable increase and allowable decrease for  $c_2$
- 3 Calculate the allowable increase and allowable decrease for  $b_1$
- 3 If we decrease change  $b_1$  by one unit, what will be the new objective function value?
- 7 Find the Dual for the above problem
- 10 0 What is the complimentary optimal basic solution = **16** ~~same in primal~~

①  $5 + .75d_3 + 1.25d_1 - d_2$   
 $d_3 = d_1 = 0$   
 $d_2 \leq .5$  allowable increase =  $3 + .5 = 3.5$   
 decrease  $\Rightarrow \infty$   
 $(-\infty, 3.5]$

For each scenario (below) follow the sensitivity analysis procedure and comment on your results.

6. Change the right-hand sides  $\begin{bmatrix} b_1 \\ b_2 \end{bmatrix} = \begin{bmatrix} 11 \\ 10 \end{bmatrix} \rightarrow \begin{bmatrix} 15 \\ 15 \end{bmatrix}$   
 $z = 95$   
 $\begin{bmatrix} 1.5 \end{bmatrix} \begin{bmatrix} 15 \\ 15 \end{bmatrix} = 15 + 7.5 = 22.5$   
 $\begin{bmatrix} .5 \\ -1/2 \end{bmatrix} \begin{bmatrix} 15 \\ 15 \end{bmatrix} = 7.5 - 7.5 = 0$   
 new opt sol  $\rightarrow \begin{bmatrix} 15/5 \\ 15/5 \end{bmatrix} = \begin{bmatrix} 3 \\ 3 \end{bmatrix}$

7. Change the coefficients of  $x_2$   $\begin{bmatrix} c_2 \\ a_{12} \\ a_{13} \end{bmatrix} = \begin{bmatrix} 3 \\ 2 \\ 3 \end{bmatrix} \rightarrow \begin{bmatrix} 4 \\ 2 \\ 3 \end{bmatrix}$   
 $z - c = yA - c$   
 $A = SA = \begin{bmatrix} .5 & -1/2 \\ -1 & 1/2 \end{bmatrix} \begin{bmatrix} 2 \\ 3 \end{bmatrix} - 4 = 2 + 1.5 - 4 = -0.5$

8. Introduce a new variable  $x_6$  with coefficients  $\begin{bmatrix} c_6 \\ a_{16} \\ a_{26} \end{bmatrix} = \begin{bmatrix} 4.5 \\ 3 \\ 3 \end{bmatrix}$   
 $A = \begin{bmatrix} 1 & -1/2 & 3/5 \\ -1 & 1/2 & 3/5 \end{bmatrix} = \begin{bmatrix} 1/2 \\ 3/5 \end{bmatrix} \Rightarrow \begin{bmatrix} -1/2 \\ 1/4 \\ 5/4 \end{bmatrix} \rightarrow$  New iteration

⑧  $\begin{bmatrix} 4.5 \\ 3 \\ 3 \end{bmatrix} \rightarrow z - c = \begin{bmatrix} 0 & .5 \end{bmatrix} \begin{bmatrix} 3 \\ 3 \end{bmatrix}$
