9. In the RTD experiment, the relationship between the Resistance and temperature is linear.
A. True
B. False

10. Thermistors are
A. Less sensitive than RTDs
B. More sensitive than RTDs

11. With all common types of RTD, the resistance increases as Temperature increases.
A. True
B. False

12. RTDs typically have much higher nominal resistance values than thermistors.
A. True
B. False

13. _____ refers to the predominant direction of the surface texture.
A. Form
B. Lay
C. Profile
D. Center line

14. The inside micrometer is one of the indirect measuring instruments
A. True
B. False

Question 2:
Define the following Terminology from the Surface Texture Experiment.   9 Points
A. Roughness

B. Waviness

C. Lay

D. Profile

E. Center line

F. Form

------------------------------ can be used to measure the pitch size of an external thread.

- ⦿ a. the micrometer
- ○ b. the vernier caliper
- ○ c. the three wires
- ○ d. the pitch gauge

Clear my choice

B

Quiz

A bench micrometer was used to measure the major diameter of an external thread, given that the diameter of the standard cylinder is 20.0000 mm. the micrometer reading over the standard cylinder was 20.9344, the micrometer reading over the thread was 21.1342 mm, then the major diameter of the thread is equal to --------

-----

Select one:

a. 19.8002 mm

• b. 20.1998 mm

c. 22.0686 mm

d. None of the above is correct

Clear my choice

Finish att

4:34 PM

In the strain gauge experiment a load of 2 N were applied at a distance of 250 mm from the strain gauge, the dimensions of the steel cantilever beam ($b = 19.75mm$), and ($h = 4.75\ mm$) where b is the width of the cantilever beam and h is the thickness

(*the cross section area* $= b.h$)

The sensitivity of the strain gauge : $k = 2.05$

The modulus of elasticity for steel : $E = 210000\ N/mm^2$

The reading of the measuring instrument $U_A/U_E = -0.069\ mV/V$.

Calculate the strain

a. 7068.293 N/mm

b. 7.068293 N/mm²

c. 0.033659

d. 3.3659 *10⁻⁵

$$\varepsilon = \frac{1}{K} \times \frac{U_A}{U_E}$$

Question 1:

A. What size is the gauge block build-up used with a 5 inches sine bar to set the workpiece at an angle of 4° 30? show your calculations
(3 points)

$\theta = 4.5°$
$B \approx L = 5 \text{ inche} = 12.7 \text{ cm}$

$\sin \theta = \dfrac{h}{L} = h = \sin 4.5° \times 12.7 = 0.9996 \text{ cm} = 0.393 \text{ inch}$

B. A student used a vernier caliper to measure the diameter of a cylinder. The diagram shows an enlargement of the caliper scales. What reading was recorded? (2 points)

1   2   3 cm

$11 \text{ m} + 0.1 \times 4 = 11.4 \text{ mm}$
C. What is the reading of the following micrometer? (2 points)

$\dfrac{0.5}{50}$

0 mm   5   20
              15
              10

$7 \text{ mm} + 0.14 \text{ mm} =$

7.14 mm

D. Using the following set of gauge blocks, what is the minimum number of blocks to be wrung together to produce an overall dimension of 47.765 mm
Show your calculations (3 points)

| Metric 103 pieces	
	Increment
1 piece (1.005) mm	
49 pieces (1.01-1.49) mm	0.01 mm

In the strain gauge experiment a load of 3 N were applied at a distance of 250 mm from the strain gauge, the dimensions of the steel cantilever beam ($b = 19.75mm$), and ($h = 4.75\ mm$) where b is the width of the cantilever beam and h is the thickness

(*the cross section area* $= b.h$)

The sensitivity of the strain gauge : $k = 2.05$

The modulus of elasticity for steel : $E = 210000\ N/mm^2$

The reading of the measuring instrument $U_A/U_E = -0.104\ mV/V$.

Calculate the strain(ε), the experimental value of the stress (σ), and the theoretical value of the stress (σ).

$$A = b.h$$

$$= 19.75 \times 4.75$$

$$= 93.8125$$

$$\boxed{\varepsilon = \frac{2.05}{4} \times (-0.104 - 1)}$$

$$= -2.2532$$

2|6

$$\boxed{\sigma = E\ \varepsilon}$$

$$= 210000 \times -2.2632$$

$$= -475272$$

Question 5:

A. Describe the working principle of the clinometer.   **8 Points**

the clinometer is special case of the application
of sipirt level in this instance level is mounted in
relatable body carried in housing are face of which
forms the base of an instrument   ?

B. A sine bar was used to measure the angle (A) of a certain specimen as shown in the following figure, the center-to-center distance between the cylinders on the sine bar (L) is equal to 100 mm. and the height of the block gauges (H) was equal to 49.535mm. Calculate the angle A.

6/8

Sine bar
Roll
Gage blocks
Workpart to be measured

$$L = 100 \cdot mm$$

$$H = 49.535$$

$$\sin \theta = \frac{H}{L}$$
$$= \frac{49.535}{100}$$

$$\theta = \sin^{-1}(0.49555)$$

$$A = 29.6928$$

Question 6:   **7 Points**

A. Write three reasons why the thermocouple has been popular choice over the years.

① cost
② It's ~~very accurate~~ availability
③ It's very a vechont
ضع نہ في لہ ات

B. Compare between the RTD and the thermistor, include the following in your answer: (resistance response to temperature change, and sensitivity)

	RTD	thermistor
resistance response	~~high~~ low	high lienir
temep	lienir leanir سب	lienir Сب
		high ✓
Sensitivity	~~high~~ stable	

lainar

Question 3:

8 Points

A bench micrometer was used to measure the dimensions for an external thread, the readings are given as:

The reading over the thread = 9.6320 mm
The reading over the cylinder = 9.7216 mm
The reading over the thread (with wires) = 10.0766 mm
The reading over the cylinder (with wires) = 13.2834mm
The reading over the thread (with prisms) = 11.9356 mm
The reading over the cylinder (with prisms) = 15.5464 mm

And you know that the diameter of the standard cylinder is equal to 30.0000 mm, the flank angle of the thread (θ) = 30°, the diameter of the wire (d) = 2.0207 mm, and the pitch size of the thread (p) = 3.5 mm

The effective diameter equation is

$$D_{eff} = T + \frac{p}{2}\cot\theta - (\csc\theta - 1) \cdot d$$

where T is the dimension under the wire

Calculate the major diameter, the minor diameter, and the effective diameter of the thread. (Show your calculations)

In the strain gauge experiment a load of 2 N were applied at a distance of 250 mm from the strain gauge, the dimensions of the steel cantilever beam ($b = 19.75mm$), and ($h = 4.75\ mm$) where b is the width of the cantilever beam and h is the thickness

(the cross section area = $b.\ h$)

The sensitivity of the strain gauge : $k = 2.05$

The modulus of elasticity for steel : $E = 210000\ N/mm^2$

The reading of the measuring instrument $U_A/U_E = -0.069\ mV/V$.

Calculate the strain

O a. 7068.293 N/mm^2 C

O b. 7.068293 N/mm^2

**Question 2:** (12 points)

Fill in the space:

A. The reading of the following vernier caliper is ..3.34.. cm and the accuracy is ..0.05.. mm

main scale

vernier
scale

3.3
0.04
―――――
3.34

B. The reading of the following micrometer is ..9.28 mm and the accuracy is ..0.1.. mm

5
0
45
40

C. The reading of the following vernier bevel protractor is 49° 20′, and the accuracy is ..0.05

Question 3:

Using the root mean squared (RMS) method of surface roughness calculate the value of the surface roughness for the following ordinates obtained testing work piece of a length L equal to 0.5 mm, where **h** are the ordinates of surfaces from mean line and the vertical magnification factor is equal to 200000 times.

$RMS = \sqrt{\frac{\Sigma y^2}{length}} \times \frac{1}{V.M.F}$

ordinates	h(mm)
1	0.45
2	- 0.55
3	0.65
4	0.20
5	-0.35
6	0.12
7	0.06
8	-0.12
9	-0.17
10	0.12

$c_{la} = \dfrac{h_{max} - h_{mb}}{Magnification}$

$= \dfrac{0.65 - (-0.55)}{200000} = 6 \times 10^{-6}$

$\dfrac{(1.51)^2 - (1.25)}{5 \times 200000} = 2.9 \times 10^{-7}$

$\sqrt{\dfrac{\Sigma h^2}{n}} \times \dfrac{1}{m} = \sqrt{\dfrac{1.1657}{10}} \times \dfrac{1}{200000} = 1.707 \times 10^{-}$

$\dfrac{0.65 + (-0.55)}{L} = \dfrac{0.65 - 0.55}{0.5} = 0.2$

4/5

Question 4:

Define the following terminology from the (thread measurement experiment)
1. major diameter $d_{major} = D (R_{th} - R_c)$

Question 1:

Select the best answer for each of the following paragraph:

(15 Points)

1. What device is similar to an RTD but has a negative temperature coefficient?
A. Strain gauge
B. Thermistor
C. Negative-type RTD
D. Thermocouple

2. Temperature sensing can be achieved by the use of
A. Thermocouples
B. RTDs
C. Thermistors
D. All of the above

3. The output voltage of a typical thermocouple is
A. less than 100 mV
B. greater than 1 V
C. Thermocouples vary resistance, not voltage
D. None of the above

4. The connections to a thermocouple:
A. can produce an unwanted thermocouple effect, which must be compensated for
B. produce an extra desirable thermocouple effect
C. must be protected, since high voltages are present
D. both B and C are correct

5. The purpose of compensation for a thermocouple is
A. to cancel unwanted voltage output of a thermocouple
B. to decrease temperature sensitivity
C. to increase voltage output
D. used for high-temperature circuits

6. The strain gauge resistance varies with:
A. Vibration
B. Heat
C. Weight
D. Bending

7. RTD stands for
A. Relative Thermal Devices
B. Radioactive Thermonuclear Dipoles
C. Resistance Temperature Detectors
D. Resistive Temperature Devices

8. The decrease of resistance with the temperature increase is a property of
A. Thermocouple
B. bimetallic thermometer
C. Thermistor
D. RTD

Student name: _____   Student no: _____   Section: _____

Question 1:

If the length of the sine bar (L = 100 mm), and the height of the gauge blocks (h=50 mm), then the angle theta is equal to --------------------
O a. 30 degree

O b. 45 degree

O c. 60 degree

O d. none of the above is correct

30
⟹ 7.14 mm

What size is the gauge block build-up used with
a 10 inches sine bar to set the work piece at
an angle of 4° 30′? Show your calculations

$$\sin\theta = \frac{h}{L} \Rightarrow \boxed{h = \sin\theta \times L}$$

Describe the working principle of the Auto collimator?
The Auto collimator is an optical device used to measure
small angles with very high sensitivity. The Auto collimator
projects a beam of collimated light. An external reflector
reflects all or part of the beam back into the instrument
where the beam is focused and detected by a photodetector [3]

the Auto collimator measures the deviation between the

uestion 2

surface was tested for straightness using an autocollimator and reflector; the readings are
hown in the following table, if one second of arc increase in angle observed corresponds to a
ise of 0.25 micron of the front end of the reflector relative to its rear end.

1. Construct a profile graph of the surface relative to the initial points (0-50 mm).
   (5 points)
2. Using the end points method to calculate the max deviation of the profile from the
   straight line. (3 points)

| Position	Autocollimator reading	Difference from first reading	Rise or fall over 100 mm	Cumulative rise or fall	Adjustment required	error
mm	Sec	sec	micrometer	micrometer		
0		୦	0	୦	୦	
0 -50	8	0	0	0	1	
50-100	10	2	0.5	0.5	2	
100-150	18	10	2.5	3	3	
150-200	22	14	3.5	6.5	.4	
200-250	24	16	4	10.5	5	
250-300	14	6	1.5	12	6	
300-350	10	2	0.5	12.5	7	
350-400	16	६	2	14.5	8	
400-450	18	10	2.5	17	7	
450-500	20	12	3	20	10	

$$m = \frac{74 \cdot 44}{m} = 12.7$$

$$\bar{y} = 1.8181$$

$$C = \bar{y} - m\bar{x}$$

$$= 1.8181 - 29 \times 12.7$$

$$= -3173.1817$$

The reading of the vernier bevel protractor is
a. 28 degrees and 34 minutes

b. 28 degrees and 15 minutes

c. 34 degrees and 15 minutes

d. 15 degrees and 34 minutes

B

In the strain gauge experiment a load of 2 N were applied at a distance of 250 mm from the strain gauge, the dimensions of the steel cantilever beam ($b = 19.75$ mm), and ($h = 4.75$ mm)
where b is the width of the cantilever beam and h is the thickness
(the cross section area $= b.h$)
The sensitivity of the strain gauge : $k = 2.05$
The modulus of elasticity for steel : $E = 210000$ N/mm^2
The reading of the measuring instrument $U_A/U_E = -0.069$ mV/V.

A. Calculate the strain(ε), the experimental value of the stress (σ), and the theoretical value of the stress (σ).

B. Comment on the results of the stress you calculated in A.

The block gauges can be used to check the accuracy of the micrometer

Select one:

True

○ a. True

○ b. False

A student used a vernier micrometer to measure a certain dimension. The diagram shows an enlargement of the micrometer scales. What reading was recorded?
Note: the dimensions on the sleeve are in mm.

15

10

5
